

**Part Number:** 3946010      **F/KIT:** 6172310      **BOLT PACK** 6172309

**Product Description:** COMBINATION SAHARA BAR FLARED

**Suited to vehicle/s:** MITSUBISHI TRITON 2006 ON

**Buffer Kit:** 5100020 (Sahara Bar), 5100030 (Sahara Bumper)

**Centre Frame:** 5146010 (Polished Centre Frame)

## WARNING

### REGARDING VEHICLES EQUIPPED WITH SRS AIRBAG:

When installed in accordance with these instructions, the front protection bar does not affect operation of the SRS airbag.

### ALSO, NOTE THE FOLLOWING:

- ◆ This product must be installed exactly as per these instructions using only the hardware supplied.
- ◆ In the event of damage to any bull bar component, contact your nearest authorised ARB stockist. Repairs or modifications to the impact absorption system must not be attempted.
- ◆ Do not use this product for any vehicle make or model, other than those specified by ARB.
- ◆ Do not remove labels from this bull bar.
- ◆ This product or its fixing must not be modified in any way.
- ◆ The installation of this product may require the use of specialized tools and/or techniques
- ◆ It is recommended that this product is only installed by trained personnel
- ◆ These instructions are correct as at the publication date. ARB Corporation Ltd. cannot be held responsible for the impact of any changes subsequently made by the vehicle manufacturer
- ◆ During installation, it is the duty of the installer to check correct operation/clearances of all components
- ◆ Work safely at all times
- ◆ Unless otherwise instructed, tighten fasteners to specified torque

---

# GENERAL CARE AND MAINTENANCE

By choosing an ARB Bar, you have bought a product that is one of the most sought after 4WD products in the world. Your bar is a properly engineered, reliable, quality accessory that represents excellent value. To keep your bar in original condition it is important to care and maintain it following these recommendations.

- Prior to exposure to the weather your bar should be treated to a Canuba based polish on all exposed surfaces. It is recommended that this is performed on a six monthly basis or following exposure to salt, mud, sand or other contaminants.
- As part of any Pre Trip Preparation, or on an annual basis, it is recommended that a thorough visual inspection of the bar is carried out, making sure that all bolts and other components are torqued to the correct specification. Also check that all wiring sheaths, connectors, and fittings are free of damage. Replace any components as necessary.
- Please contact local Authorised ARB Stockist if you would like to have this service carried out on your behalf.

## HAVE AVAILABLE THESE SAFETY ITEMS WHEN FITTING PRODUCT:

### BASIC TOOL KIT

### JIG SAW OR KEY HOLE SAW

Protective eyewear

Hearing protection

**NOTE:** 'WARNING' notes in the fitting procedure relate to OHS situations, where to avoid a potentially hazardous situation it is suggested that protective safety gear be worn or a safe work procedure be employed. If these notes and warnings are not heeded, injury may result.

**SHADED AREAS INDICATE ADDITIONAL KITS REQUIRED DEPENDENT ON  
SAHARA BAR/BUMPER SELECTION**

**TO FIT OPTIONAL FOG LIGHTS TO BAR, USE KIT NO. 6821201 AND  
WIRING HARNESS PART NO. MD02**

PARTS TO FIT BAR TO VEHICLE

**ASSEMBLY SEQUENCE FOR BULL BAR INSTALLATION.  
PLEASE READ AND UNDERSTAND FITTING INSTRUCTIONS BEFORE  
ATTEMPTING TO FIT BAR TO VEHICLE**

- 1. To fit a bar to vehicle, the plastic bumper, grill panel has to be cut.**
- 2. The bumper will be cut later. Refer to step 8.**

- 3. Remove grill and plastic bumper panel from front of vehicle.**
- 4. When removing bumper, you will have to unclip flares half way back towards rear of vehicle.**

- 5. Remove flare/bumper bracket from vehicle.**

JIGFUYR DGDGF

**6. Remove crossmember and mounting brackets from vehicle.  
LKHHG**

**7. With the bumper removed, you must remove lower grille section and fog light aperture rear panels, then refit bumper to vehicle.**

8. At this stage draw a point 120mm down from panel line on each side of vehicle and 20mm in the centre.  
( AS PER PHOTO ) Using masking tape, join points to points across the front of the vehicle then remove bumper from vehicle. Using a jig saw or a small hand saw, cut across drawn line. Dress up with a file.

9. Refit bumper back to vehicle and secure using originals fittings.
10. At this stage it is time to cut the lower section of the flares.
11. Temporarily refit front of flare back to front of vehicle.
12. Using the template supplied in bolt kit, fit to vehicle as per photo and secure using tape.
13. Draw a line to cut, then remove template and mark out other side.

**14. Lift flare away from vehicle, and cut along the drawn line, follow the same procedure on the other side.**

**15. When flare is cut off clean up with a file.**

**16. Now the next step is to mark out and cut off bumper panel under the flare.**

**17. Follow the flare line down as per photo and under bottom of flare.**

**18. Once again lift flare away from guard and cut out marked section.**

**19. Clean up with a file and refit flare.**

**20. When you are about to cut the LHS of vehicle, you must temporarily remove the washer bottle to enable to cut the lower section of the guard panel. Refit flare and washer bottle after cutting.**

**21. At this stage the vehicle is ready to fit impact absorb mounting assembly.**

**22. Fit impact absorb mounting assembly to vehicle chassis.**

**VIEWED FROM RHS**

**10MM CHASSIS CAPTIVE NUT**

**23. Before fastening impact absorber to vehicle, fit rear brace in between impact absorber and chassis and align rear holes with vehicle chassis holes.**

**24. RHS has a 10mm x 1.25 ( fine thread ) captive nut. Use top hole. Secure using a 10mm x 30mm x 1.25 bolt, spring washer and a 10mm flat washer. Finger tighten only.**

**FITTING 10MM X 30MM X 1.25 BOLT**

**25. LHS side has a hole only, where a 10mm x 30mm 1.5 SEMS bolt is fitted and secured by a 10mm flange nut.**

**FINGER TIGHTEN**

**SEMS BOLT & FLANGE NUT**

**26. Using M10 x 50 x 1.25 mm bolt, 10mm spring washer, large flat washer and packer, feed into top hole and move down and screw bolt into captive nut in chassis.**

**FINGER TIGHTEN ONLY**

**VIEWED FROM RHS**

**27. With the side and rear bolts fitted, fit the most rearward bolts to each side of the vehicle. Tighten all six bolts firmly.**

**NB. Before tightening, make sure that the two flanges are touching the body mount.**

**MOST REARWARD BOLT RHS**

**DO NOT DRILL IN  
SLOTTED HOLE**

**28. Using a 10mm drill bit, drill holes through chassis crossmember, using holes in mount as a template.  
29. Secure using 10mm X 30mm SEMS bolts, 10mm flange nuts. When the two bolts are fitted, tighten securely.**

**30. Using a long 10mm drill bit, drill through vehicle body mount using hole in mount as a template, secure using 10mm X 30mm SEMS bolt, 10mm flange nut. When both sides of vehicle are done, tighten firmly.**

**8MM HARDWARE**

**31. Lastly, fit M8 x 20mm bolt, spring washer, flat washer and 8mm flange nut to mounting assembly and tighten firmly.**

**USE BRIGHT ZINC  
M8 HARDWARE**

**SEE PHOTO STEP 30**

**ARROWS INDICATE PLACEMENT**

**32. When impact absorber is securely bolted to vehicle, fit 8mm caged nuts to mounting assembly.**

**SEE PHOTOS FOR  
PLACEMENT OF  
CAGED NUTS, 5 IN TOTAL.**

**CAGED NUTS FOR UNDER WING PANS**

**33. The next step is to fit the buffers to the bar using 6mm flange nuts, 6 per side. ( DO NOT OVER TIGHTEN )**

**34. Fit 6mm caged nuts into lower flange of centre section of bar, 3 in total.**

**35. If you are not going to fit a winch to the bar, go to step 48**

**36. Firstly if a winch is going to be fitted to the bar, fit control box bracket to bar using 8mm hardware. Next fit number plate bracket to bar using 6mm hardware.**

**IN BOTH CASES USE BRIGHT  
ZINC PLATED HARDWARE.**

**ORIGINAL**

**VIEWED FROM  
LHS OF**

**ROTATED**

### **TO FIT A WINCH BAR**

**37. To fit an 8/9/9.5/000lb winch, rotate gearbox 72° counterclockwise.**

**Stand winch upright and undo the capped head screws and by lifting the gearbox only a couple of millimeters, rotate the gearbox. Once in position, refit all screws and tighten firmly.**

**WARNING: Do not lift gearbox more than a couple of millimeters.**

**38. To fit control box to bar, you must change the arrowed lead (yellow tagged ) in photo with the longer lead that is supplied in fitting kit. When all is fitted, screw plastic cover back onto control box.**

**39. To fit winch into bar you must pack winch up on a bench to enable you to lower bar down on winch, then fit four 3/8 " square nuts into winch lugs .**

**40. Lower bar down over winch, line up top holes first and secure using 3/8" hardware (1 1/2" x 3/8" bolts) flat and spring washers. ( finger tighten only )**

**41. Drill two new 13mm holes in the roller fairlead provided in the kit, as shown on the adjacent picture.**

**Use new drill holes to bolt to bar.**

**42. Place roller fairlead over lower holes and again secure using 3/8" hardware (1 3/4"x 3/8" bolts) flat and spring washers.**

**43. Using circlip pliers, remove lower circlips and push shaft upwards to be able to move rollers sideways.**

**44. Using screwdriver move vertical rollers sideways and tighten all bolts using socket and extension.**

**45. Refit rollers and circlips.**

**46. Fit rubber grommets into round holes in top of bar, then fit control box to control box bracket and pass cables through rubber grommet.**

**ARROW INDICATES RUBBER GROMMETS.**

**47. Fit all 3 cables to their correct terminals and tighten. Refer to Warn installation instruction when wiring up winch. Fit plastic boots over terminals. Cable tie cables to bar as per photo to clear of all moving parts.**

**48. Fit ground wire under winch tie rod. ( See Photo )**

**GROUND WIRE**

**49. Fit 10mm caged nuts into each side of bar. ( 3 per side )**

**RHS SHOWN**

**50. Fit light insert into rear of bar using 4 screws, rubber washers and retainer clips. ( Do not over tighten )**

**51. Install the turn signal into the rear of light insert using 2 self tapping screws 6 x 25mm pan head) supplied with the light insert fitting kit.**

**NOTE :- The indicators should be installed with the drain holes at the bottom and are marked LH / RHS. ( Clearance lights outboard )**

ARROWS INDICATES POSITION OF SCREWS

**52. If optional fog lights are going to be fitted to bar , follow fitting instructions from fog light kit part no. 6821201 and wiring harness part.no.MD02**

**PHOTO IS FOG LIGHTS FITTED TO BAR**

**53. With the help of a friend, lift bar in between impact mounting bracket and align slots on mounting bracket to caged nuts on side of bar. Secure using M10 SEMS bolts.( finger tighten only)**

**54. Using body moulding strip, fix to lower section of cut flare and trim to fit.**

**55. At this stage it is time to adjust the height of the bar to under the flare gap which is 15, 20mm, and the parallelism between bar and vehicle.**

**VIEWED FROM INSIDE LHS OF VEHICLE**

**56. When all the six bolts have been tighten firmly, using the lower holes from inside the bar as a template, drill through the impact absorber bracket using a 10mm drill bit and fasten with a 10mm SEMS bolt and a 10mm flange nut.**

**VIEWED FROM INSIDE LHS OF VEHICLE**

**57. When bar is secured to mounting bracket, connect winch cables to battery and cable tie cables together to clear of all moving parts, sharp edges and hot parts.**

**LHS OF VEHICLE**

**58. Pull indicator loom up into engine bay to scotch lok wiring onto vehicle indicator/clearance lamps**

**Summary of Wire Connections**

FUNCTION	TURN SIGNAL HARNESS	VEHICLE PARK LAMP	
		RIGHT	LEFT
PARK LAMP	RED	GREEN/WHITE	GREEN/BROWN
VEHICLE INDICATOR			
		RIGHT	LEFT
EARTH	BLACK	BLACK	BLACK
INDICATOR	GREEN	GREEN	GREEN

**LHS OF VEHICLE**

**59. Before fitting under wing surround panels to bar, you must cut back washer bottle to give clearance of panel.**

- 60. The next step to fit wing braces to both sides of the bar using 8mm hardware.**
- 61. Photo is of RHS of bar where brace fits to the mounting assembly.**

- 62. Photo shows brace looking through lighting assembly aperture in front of bar**

**LIGHT APPERTURE REMOVED FOR CLARITY**

- 63. Once bar is secured to vehicle, it is time to fit centre tube to bar.**
- 64. Press fit centre tube into round holes in top of buffers and secure using 12mm hardware, tighten firmly.**

**LIGHT ASSEMBLY REMOVED FOR**

PHOTO INSIDE VIEW OF RHS

**65. Fit M6 caged nuts into both L/RHS of under wing surround panels. ( 5 per side )**

**66. Fit wing panels using black M6 hardware as per photo to both sides of vehicle. ( 4 per side )**

**Fit M8 black hardware as per arrow.**

**Viewed from RHS of vehicle.**

**67. Remove plastic inner guards and cut along marked line then refit back to vehicle.**

**FINISHED CUT GUARD**

**68. Using a pointed object, eg Phillips head screw driver, align with 6mm caged nut and press hole in plastic guard large enough for a 6mm bolt.**

**69. Secure plastic inner guard to under wing pan using black 6mm hardware making sure to tuck inner guard in behind bar wing return.  
( as per photo )**

**TRIM PLASTIC GUARD OFF  
AS PER ARROW**

**70. Fit air deflector under centre of bar using M6 black hardware at the front of bar and M8 hardware at the rear of bar.**

**M8 HARDWARE**

**Fit number plate to number  
plate bracket using 6mm  
hardware**

**71. Fit rubber extrusion around the outer edge of cover panel if a winch is not going to be fitted to bar. Secure cover panel to bar using 6mm hardware.**

**72. If you are not having a winch fitted to the bar, fit plastic grommets into the round holes and secure using black pan head screws to secure number plate to bar as per photo.**
